SUMMARY

DevOps Engineer with hands-on experience in cloud infrastructure and automation, specializing in CI/CD pipeline development and containerized applications. Proficient in tools such as Docker, Kubernetes, and Terraform, with experience in AWS environments. Demonstrated ability to improve deployment efficiency, system reliability, and scalability through automation and best practices. Strong collaborator with a focus on continuous integration, monitoring, and performance optimization.

EDUCATION

B. Tech (Computer Science Engineering)
Shivaji University (TKIET) **2021 - 2025**
Class: A

SKILLS

- **Cloud (AWS):** EC2, S3, VPC, IAM, RDS, DynamoDB, Lambda, CloudWatch, CloudTrail, ELB, Route 53, Auto Scaling.
- **DevOps & Automation:** Git, GitHub, GitLab, Bitbucket, Jenkins, Terraform, Ansible.
- **Containers:** Docker, Docker Compose, Kubernetes.
- **Linux & Scripting:** Shell scripting, SSH, User management.
- **Networking & Security:** VPC networking, NAT, VPN, Security groups, IAM policies, S3 lifecycle policies.
- **Monitoring tools:** Prometheus and Grafana.

EXPERIENCE

DevOps Intern | Cravita Technologies. Ltd **July 2025 – march 2026**

- Configured and managed AWS services like EC2, S3, IAM, and VPC for secure and scalable infrastructure.
- Designed and maintained CI/CD pipelines using Jenkins and GitHub.
- Containerized microservices using Docker and orchestrated deployments on Kubernetes (EKS).
- Implemented Infrastructure as Code using Terraform with S3 remote backend and state locking.
- Integrated security best practices such as IAM roles, least privilege access, and secrets management.

PROJECTS

End-to-End Automated Cloud Voting System: Jenkins CI/CD on AWS EKS & RDS *View Project 1*

- Orchestrated a scalable Node.js application on **Amazon EKS (Kubernetes)**, using a **Load Balancer** to manage external traffic and ensure high availability.
- Built an automated **CI/CD pipeline** with Jenkins (Master-Slave) to handle the full lifecycle from GitHub code commits to Docker Hub image deployment.
- Integrated a persistent backend via **Amazon RDS (MySQL)**, securing data traffic through custom **VPC** Security Groups and IAM-based authentication.
- Optimized container networking by configuring specific port mappings (80 to 3000) and manually initializing **SQL** schemas for seamless database connectivity.
- Enhanced security posture by implementing **IAM** Access Entries, allowing the Jenkins server to securely manage the **EKS cluster** without static credentials.

Technology Stack: AWS (EKS, RDS, IAM, VPC), Kubernetes, Jenkins, Docker, Node.js, MySQL, Linux.

End-to-End Automated Cloud Registration System: A Jenkins-Docker-AWS Pipeline *View Project 2*

- Integrated **CI/CD Automation** by configuring a **Jenkins** pipeline to trigger automated builds, image tagging, and deployment stages upon GitHub code commits.
- Provisioned Infrastructure as Code (IaC) using **Terraform** to architect a secure **AWS** environment, including custom **VPC** networking and a managed **RDS (PostgreSQL)** instance.
- Containerized Application Lifecycle using **Docker** to build optimized images, ensuring environment consistency and managing versioned image storage via **Docker Hub**.
- Implemented Secure Database Connectivity by configuring an SSL/TLS handshake within the application layer to meet **AWS RDS** encryption and security requirements.
- Engineered Networking & Security through custom Security Groups, ensuring the database remains isolated in a **private subnet** while allowing encrypted traffic from the app server.

Technology Stack: AWS (EC2, RDS, VPC), Terraform, Jenkins, Docker, GitHub, Node.js, PostgreSQL, SSL/TLS, Linux.
